Köln, 01/28/2021

Dear Stephan,

I very much look forward to the continuation of our successful collaboration within the framework of the SFB 1089 and to start working on our new joint project “Dentate gyrus activity patterns and their intra-hippocampal coordination in behavior and disease” in the next funding period.

In line with our agreement of the last funding period, and provided that the current project is funded, I would like to confirm that you will be the last senior author on all publications resulting from this study and that you will also act as corresponding author.

Besides, we will jointly decide on the work program to be pursued and the experiments to be conducted.

This project is also aimed at promoting your scientific independence as main PI and at giving you the opportunity to advance this project in coordination with the other SFB team members.

I will be glad to continue working with you in the same constructive, cooperative, and goal-oriented manner as in the last funding period.

Best regards,

A handwritten signature in black ink, appearing to read 'Dirk Isbrandt'.
